Forward-Looking Information

Forward-Looking Information. Certain statements regarding Regulus, including management's assessment of future plans and operations, may constitute forward-looking statements under applicable securities laws and necessarily involve known and unknown risks and uncertainties, most of which are beyond Regulus' control. Often, but not always, forward-looking statements or information can be identified by the use of words such as "plans", "expects" or "does not expect", "is expected", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates" or "does not anticipate" or "believes" or variations of such words and phrases or statements that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved.

Specifically, and without limitation, all statements included in this presentation that address activities, events or developments that Regulus expects or anticipates will or may occur in the future, including the proposed exploration and development of the AntaKori project described herein, the completion of the anticipated drilling program, the completion of an updated NI 43-101 resource estimate, the impact of the COVID-19 pandemic on the Canadian and worldwide economy, the Company's workforce, worldwide demand for commodities and the Company's business generally and management's assessment of future plans and operations and statements with respect to the completion of the anticipated exploration and development programs, may constitute forward-looking statements under applicable securities laws and necessarily involve known and unknown risks and uncertainties, most of which are beyond Regulus' control. These risks may cause actual financial and operating results, performance, levels of activity and achievements to differ materially from those expressed in, or implied by, such forward-looking statements. Although Regulus believes that the expectations represented in such forward-looking statements are reasonable, there can be no assurance that such expectations will prove to be correct. The forward-looking statements contained in this presentation are made as of the date hereof and Regulus does not undertake any obligation to publicly update or revise any forward-looking statements or information, whether as a result of new information, future events or otherwise, unless so required by applicable securities law.

Presentation of Resource Estimates. This presentation uses the terms "indicated" and "inferred" in connection with its resource presentations, as defined in accordance with National Instrument 43-101 Standards of Disclosure for Mineral Projects ("NI 43-101") under guidelines set out in the Canadian Institute of Mining, Metallurgy and Petroleum (the "CIM") Standards on Mineral Resources and Mineral Reserves adopted by the CIM Council on May 10, 2014. An Inferred Mineral Resource is that part of a Mineral Resource for which quantity and grade or quality are estimated on the basis of limited geological evidence and sampling. Geological evidence is sufficient to imply but not verify geological and grade or quality continuity. An Inferred Mineral Resource has a lower level of confidence than that applying to an Indicated Mineral Resource and must not be converted to a Mineral Reserve. It is reasonably expected that the majority of Inferred Mineral Resources could be upgraded to Indicated Mineral Resources with continued exploration. An Indicated Mineral Resource is that part of a Mineral Resource for which quantity, grade or quality, densities, shape and physical characteristics are estimated with sufficient confidence to allow the application of Modifying Factors in sufficient detail to support mine planning and evaluation of the economic viability of the deposit. Geological evidence is derived from adequately detailed and reliable exploration, sampling and testing and is sufficient to assume geological and grade or quality continuity between points of observation. An Indicated Mineral Resource has a lower level of confidence than that applying to a Measured Mineral Resource and may only be converted to a Probable Mineral Reserve. All of Regulus' exploration programs and the related disclosure of information of technical or scientific nature are prepared by, or prepared under the direct supervision of Dr. Kevin B. Heather, FAusIMM, Regulus' Chief Geological Officer, who is a "qualified person" as defined in NI 43-101.
TEAM HAS HISTORY OF CREATING VALUE

- Converted Haquira from small copper oxide deposit to a Tier 1 porphyry copper deposit
- Upon completion of PEA, sold to First Quantum Minerals for ~C$650 MM
- People who invested in the downturn of 2008-09 saw a ~20x return by 2010

- Converting AntaKori from a moderate sulphide deposit to a Tier 1 sulphide/porphyry-skarn deposit
- Better location, better grade, better strip, bigger potential than Haquira
- Advancing AntaKori towards an updated resource and PEA

Team is using a proven strategy to develop an asset that will likely be acquired by a major miner.
Management and Directors have invested > C$2.6 MM in Regulus shares since January 2018 (Average entry price C$ 1.23). Management interests fully aligned with shareholders.
PREMIER LOCATION IN PERU

Project is located in Peru, the second largest copper producing country in the world.

$
Covid-19 has not affected the long-term outlook for copper:
- “From an end-use perspective, demand for copper is expected to remain solid on the back of the ongoing trend towards decarbonisation, underpinned by trends such as renewable energy, electromobility and energy efficiency” – Wood Mackenzie
- Several major producers have announced they are slowing or temporarily stopping development of new copper projects
- Covid-19 may increase long-term demand for copper in health care centres due to its antimicrobial properties

AntaKori district timeline ties well with timeline for projected shortfall in copper supply.

Resource completed using 0.3% CuEq cut off and constrained utilizing a 60,000tpd conceptual open pit.

CuEq were calculated using the following metal prices: Au = US$1,400/oz, Cu = US$3/lb, Ag = US$18/oz.

The formulas utilized to calculate equivalent ounces are CuEq (%) = Cu% + (Au g/t * 0.7136) + (Ag g/t * 0.0091)

Details of resource estimate in appendix
High Grade Near Surface

- Approximately 36% of total tonnes within the top 300 m of the deposit are >0.7% CuEq
- Approximately 59% of total tonnes within the top 300 m of the deposit are >0.5% CuEq
- Combined strip ratio (including Coimolache’s data) of open pit is 0.85/1

*See appendix for breakout of Indicated and Inferred*
When combining our resource with Coimolache’s, the combined deposit is similar in size to world class operations.

*As per SNL Financial, Toromocho Total R&R at start of mine life from 2014, Las Bambas Total R&R at start of mine life from 2013 ** CMC (Coimolache) resources from 2016, as per SNL
CuEq calculated using $US 3/lb Cu, $US 1450/Oz Au and $US 18/Oz Ag

### Notes:
- **5 of the top 20 CuEq intercepts since January 2018**
- **3 of the 5 best AntaKori intercepts are not incorporated in the current resource estimate**

As per SNL financial, as of May 1, 2020, SNL search criteria include: >450 m interval, primarily copper interval & reported after Jan 1, 2018. Only longest reported interval considered. Any interval from a company with production is excluded. CuEq estimates calculated using US$2.25 Cu, US$1,100 Au and US$14 Ag. The formulas utilized to calculate equivalent values are CuEq (%) = Cu% + (Au g/t * 0.7130) + (Ag g/t * 0.0091)

*AK-18-026 was drilled prior to the resource update, however the referenced intercept lacked supporting nearby drill holes to be considered in resource estimation. AK-19-31 was drilled after the resource estimation and was an infill hole which will likely improve grade and convert inferred to indicated. AK-19-034 was drilled after the resource estimation and was in a previously untested area.*

11
Mineralization is open to the north in AntaNorte

**SIGNIFICANT GROWTH POTENTIAL**

We have begun testing the edges of the geophysical targets to the north with positive results:

- AK-19-026 – 473.20 m of 1.39% CuEq
- AK-19-034 – 819.90 m of 0.77% CuEq
- AK-19-035 – 504.15 m of 0.53% CuEq
- AK-19-039 – 168.15 m of 1.15% CuEq
- AK-19-041 – 341.00 m of 0.85% CuEq

11,000 m drilled in virgin area AntaNorte

62.3% hit reportable mineralization
SIGNIFICANT GROWTH POTENTIAL

TSX V. REG
SIGNIFICANT UPSIDE TO MARKET CAP AND SHARE PRICE

Regulus compares well to peers in the junior copper sector as an exciting value opportunity.

As per July 13, 2020 - SNL Financial - CuEq calculated using $3/lb Cu, $1450/Oz Au, $18/Oz Ag & $10/lb Mo
FOCUSED ON THE END GAME

SUSTAINABLE VALUE FOR ALL STAKEHOLDERS

ACTIVELY INVOLVED IN LONG-TERM COMMUNITY AND ENVIRONMENTAL PROJECTS
Regulus has a **collaborative approach on the ground to work on long-term projects** with local communities to increase agricultural yield, support improved health and education, and carry out environmental remediation work.

LARGE DEPOSIT WITH POTENTIAL FOR MULTIGENERATIONAL MINE LIFE
Regulus is advancing AntaKori as a world-class copper-gold deposit that has the potential to have a long mine life which would continue local employment for generations to come.

A TECHNICAL APPROACH THAT WILL FACILITATE MINING ANTAKORI
Unlike many juniors, Regulus extensively collects data sets, e.g. petrographic and hyperspectral data (Core Scan), which will facilitate the mining of AntaKori and adds considerable value to the project in the eyes of a major looking to acquire Regulus.
**WHAT ARE THE UPCOMING EXPLORATION CATALYSTS?**

*Next Exploration Catalyst Will Be Restarting Phase II Drill Program*

EXPLORATION AGREEMENTS WITH THE NEIGHBOURS

District Consolidation – Two Agreements in Place

1. Coimolache Agreement
   • Allows Regulus to see all drilling on neighbour’s ground established within the agreement (grey area on map)
   • Allows Regulus to model and constrain, with an open pit, the combined sulphide resource and report the portion that fall on Regulus ground*
   • Mutual rights of access
   • Allows Coimolache to layback oxide pit by paying a 5% NSR on any oxides mined on Regulus ground

2. Colquirrumi Agreement
   • Option to earn a 70% interest by drilling 7,500 m within 3 years of obtaining necessary permits
   • Buenaventura has a one-time option to claw-back to 70% by paying Regulus US$9 MM, leaving Regulus with a 30% interest

*Coimolache may have more resources beyond the area covered in the agreement
